COMP 353
Brian Nguyen

1) result = client.mflix.movies_initial.find({'imdbRating': {'$gte': 9}})

pprint.pprint(list(result))

2) 32

3 'Untitled WWII Romantic Thriller'

4) 40

Please note that this solution was achieved using the workaround method as I was running into issues on Mac OSX. The following were the queries performed:

pprint.pprint(list(client.mflix.movies_initial.find({"cast": {'$regex': 'Brad Pitt'}})))

client.mflix.movies_initial.count_documents({"cast": {'$regex': 'Brad Pitt'}})
